

Product Understanding Challenge

1. Understand the QMS Through an API Manufacturing Example

- Use a realistic API scenario and map: Raw Material → Manufacturing → In-Process Checks → Deviation → Investigation → CAPA → Batch Release → Complaint / Recall → Supplier Quality.
- Understand what each process does, who uses it, why it is needed, and how the processes connect.
- Focus on Deviation Management and Investigation → Root Cause → CAPA → Closure.
- AI tools such as ChatGPT/Gemini are allowed for research; **explain your final understanding in your own words.**

3. Submission

VIDEO

QMS UNDERSTANDING

5–10 minutes

Using your API manufacturing example, explain:

- What is a QMS and why is it needed?
- How is it used during API manufacturing?
- Give a Deviation example.
- Explain Investigation → Root Cause → CAPA → Closure.
- Connect Complaints, Recalls, Adverse Events and Supplier Management.
- What is AIVOA's Deviation workflow trying to achieve?
